**Donor Eligibility:** Policies regarding donor assessment for Zika Virus (ZIKV) risk should be established using current guidance. A known, active infection is a rule out for tissue and eye donation, however, **organ donor eligibility should be based on current guidance** from the Organ Procurement and Transplantation Network (OPTN); see Guidance for organ donation and transplantation professionals regarding the Zika virus. Per FDA/CBER for donors of cells/tissues, persons with a medical diagnosis of ZIKV infection in the past 6 months are not eligible; see Donor Screening Recommendations to Reduce the Risk of Transmission of Zika Virus by Human Cells, Tissues, and Cellular and Tissue-Based Products; Guidance for Industry. Knowledge of when the potential donor was diagnosed by a healthcare professional is useful and information collected via the DRAI process should be verified by contacting the healthcare professional(s) involved. Local policy and/or international requirements can be stricter.

**Flowchart for Zika Virus Addendum**

**Questions at Z1.**

1. **Question Z1.**
   - Z1. Was she/he* told by a healthcare professional she/he* was infected with the Zika Virus?
   - Z1a. When was she/he* diagnosed?
   - Z1b. Provide any contact information for the healthcare professional (e.g., name, group, facility, phone number, etc.):

2. **Eligible**
   - > 6 months ago

3. **Ineligible**
   - ≤ 6 months ago
   - Tissue/Eye: Ineligible
   - Organs: Consult **current guidance** before organ procurement occurs

4. **Next question**
