**Donor Eligibility:** Conjunctivitis, also known as “pink eye” or “red eye,” alone may be nondescript but in conjunction with certain other recent symptoms experienced at the same time, there may be evidence of an infection involving a virus, bacteria, or certain diseases. Recent symptoms should be evaluated in light of other information, such as travel, to determine that the underlying condition is not cause for concern. For information regarding conjunctivitis, see [http://www.cdc.gov/conjunctivitis/clinical.html](http://www.cdc.gov/conjunctivitis/clinical.html) and, for symptoms related to infection with Zika Virus, see [http://www.cdc.gov/zika/symptoms/index.html](http://www.cdc.gov/zika/symptoms/index.html).

**Questions at Z2b.**

- **Question Z2b.**

  - **Z2b. (Did she/he recently have any symptoms such as):**
    - conjunctivitis, which is also called pink eye or red eye?
